Graticule
Neatline: Line weight, 0.2mm.
Curvature:
East and west sheet edge neatlines are to be straight lines from sheet corner to sheet corner.
North and south sheet edge neatlines are to indicate curvature by drawing three straight sections of line joining each 10 minutes of longitude.
Internal Graticule Lines: Interval, 10 minutes.
Line weight, 0.2mm.
Numbering:
On the neatline, full degree and minute values are shown at the 30 minute corners. Between the corners, only the minute value is shown at every 5 minute interval on a standard map.
Within the map, full degree and minute values will be shown at the graticule intersections.
Where a geographical value coincides with a grid value, the geographical value is displaced.
Geographical values on the eastern neatline will be positioned so that there is always a minimum clearance of 1mm to the grid value.
Minute Ticks:
Interval: One minute on internal graticule lines and neatline.
Line weight, 0.2mm.
Ticks: One minute ticks are drawn on the eastern side of the line of longitude and the southern side of the line of latitude.
Every 5 minute tick will be 2mm on neatline and 4mm centered on internal graticule lines.

Map Reliability
Geographic information checked from 1:250 000 scale images and supplemented using other sources (if 2012).
This map has not been field checked and some information may not be accurate.

About the NATMAP Series
There are over 3000 maps at 1:100 000 scale, of which some 1600 have been published. They are used by a wide range of professional and recreational users and are available both full and digital. For more information contact Geoscience Australia.
